GUIDE RAIL/SIGN STRUCTURES

The Creamer Companies are leaders in many types of construction — guide rail and sign structure installations are no exception. We have been installing a wide variety of guide rail systems and overhead sign structures along our nation's highways and byways and in parking garages and on private properties for more than twenty years. We install these systems in accordance with the contract specifications, or when requested, have the capability to undertake design/build projects.

J. Fletcher Creamer & Son, Inc. installs all types of guide rail systems including:

- Cable, wood, bridge railing, box beam and steel w-beam systems
- Non-vegetation barriers, including asphalt, concrete and synthetic weed barriers
- Driven, augered and bolted post systems
- All types of end treatment attachments

Our overhead sign structure capabilities include, but are not limited to:

- Post mounted, cantilevered and overhead fixed-end signs
- Footings, including spread footings, drilled caissons, and pile supported installations.

We maintain a large inventory of guide rail and sign structure materials, as well as all necessary traffic control equipment in numerous Creamer facilities throughout the US. Our highly trained and safety oriented crews are always ready to respond to an emergency project.

For more information about our guide rail and sign structure capabilities, visit our website at: www.jfcon.com

CORE VALUES

In accomplishing our Vision, the men and women that make up The Creamer Companies are committed to maintaining our Core Values of:

SAFETY

The protection of our employees and the public

QUALITY

Our employees will perform quality work

RELIABILITY

Our customers can depend on our employees to respond to their needs

INTEGRITY

Our employees will always do the right thing

PRODUCTIVITY

Our employees will produce the greatest amount of work in the least amount of time that safety will allow
